Stevan Pavlović

Senior Full Stack Engineer (AI Agents, Tech Lead)
pavlovicmstevan@gmail.com | stevanpavlovic.com | linkedin.com/in/stevanpavlovic
github.com/pavstev | Belgrade, Serbia
Serbian citizen, based in Belgrade. Open to B2B contracts or employment.

Summary

Software engineer with 11 years in backend and frontend: Node.js, NestJS, TypeScript, React, Kafka, PostgreSQL and Redis, across fintech, betting, healthtech and fleet logistics. Co-founder and part-time CTO of Safety Real Time: I have owned its technical strategy since 2022, and since September 2025 I lead a team of five that builds AI voice agents for trucking fleets. Ten engineers have reported to me directly across three companies. I build with AI coding agents and care about evals and correctness.

Skills

AI engineering: Claude Code, Agent harness engineering, Context engineering, Model Context Protocol (MCP), Local LLM inference, LoRA fine-tuning, Model evaluation, MLX, transformers.js, AI voice agents, Workflow automation
Languages: TypeScript, JavaScript, Python, PHP, Rust
Backend: Node.js, NestJS, Microservices, Event-driven architecture, GraphQL, gRPC, OpenAPI, Laravel, Symfony
Data: PostgreSQL, Redis, Apache Kafka, RabbitMQ, Elasticsearch, MySQL
Cloud and DevOps: AWS, Docker, Kubernetes, GitHub Actions, Cloudflare Workers, Infrastructure as code, Terraform, Observability, CI/CD
Frontend: React, Next.js, Astro, Tailwind CSS
Leadership: Technical leadership, Mentoring

Work Experience

Safety Real Time, Remote Oct 2022 – Present
Co-founder and CTO (part-time)

- Co-founded the company in October 2022 and have owned its technical strategy since the first plan: backend, frontend, infrastructure and, since 2025, the AI products. I interview engineers and lead hiring.
- Since September 2025, lead a team of five that builds AI voice agents, workflow automation and fleet optimization for trucking companies, built mostly with Claude, using harness and context engineering.
- Set the architecture of the fleet safety platform on Node.js, NestJS and Redis, from the mobile driver apps through real-time Redis pub/sub ingestion to the live operations dashboards: pre-trip inspections, accident reports, driver scorecards and compliance documents.
- Built most of the app frontend. Moved safetyrealtime.com from Next.js to Astro: shipped JavaScript fell from about 142 KB to 2.5 KB gzipped per page. PageSpeed mobile performance 98 to 100, LCP 1.8 s, CLS 0 and SEO 100, measured with Lighthouse and web-vitals. I own its structured data, sitemaps and indexing.

167Pluto, Remote Feb 2024 – Jun 2025
Senior Software Engineer (B2B contract)

- Led the architecture of the FundedBettor betting project and a multi-tenant casino project. Built 167Pluto's first event-driven system: NestJS and Kafka services for the bet lifecycle, odds and settlement, with tuned Kafka topics and streaming.
- Set up the React architecture of the real-time betting platform and led its move from Next.js to TanStack Router, for a smaller, faster bundle and fully typed routes and search params.
- Made the settlement pipeline replay-safe with idempotency keys. Added staged rollouts and automated canary analysis for zero-downtime deployments through peak sporting events, plus tracing, structured logs and latency dashboards for faster incident diagnosis.

Apoddo, Remote Aug 2021 – Sep 2022
Senior Back-end Developer

- Led a team of three placed with TCP on Humanity.com, a workforce management platform with hundreds of thousands of users. Contributed to its backend-for-frontend layer in Node.js and NestJS: one endpoint replaced 3 to 5 upstream API calls.

- Owned the caching: Redis cache-aside with TTL invalidation and Redis tuning, plus circuit breakers that serve cached or partial data when upstreams slow down.
- Decoupled frontend and backend releases through stable, versioned OpenAPI contracts.

Evermed, Remote Jan 2021 – Aug 2021
Software Engineer
- Built automated video transcoding pipelines on AWS for a healthcare education platform, with idempotent retries, traceable state transitions and audit logging.

Pannovate, Remote Jan 2020 – Dec 2020
Lead Backend Developer
- Made the case to the CTO for rewriting the Symfony 4 core-banking monolith in NestJS, then architected Syllo, the new service layer: bounded contexts, typed gRPC and Protobuf contracts, event-driven flows over Kafka and Redis, deployed on Kubernetes. First monolith parts moved within 5 months.
- Added double-entry style balance checks and idempotent handlers on money-moving service boundaries.
- Led a team of two engineers across backend and frontend, set the engineering standards, advised the DevOps engineer, and mentored the team through the move to Node.js, TypeScript, NestJS and event-driven design.

Quantox Technology, Belgrade, Serbia Nov 2018 – Jan 2020
Backend Developer
- Worked for Catena Media on AskGamblers.com, an iGaming review platform with 150,000+ registered users and hundreds of thousands of monthly visits: split legacy Symfony modules into cleaner service boundaries and cut resource use by up to 90% on high-load paths.
- Tuned response times and cache strategy on the SEO-critical public pages, and removed PostgreSQL and Redis bottlenecks.

Spark451, Belgrade, Serbia Sep 2017 – Jun 2018
Backend Developer
- Architected Intelligent Admissions, the Decision451 module of the Element451 higher-education CRM: rule-based scoring in PHP and Laravel over hundreds of properties per application, triggering enrollment workflows for 20+ partner institutions and hundreds of thousands of admissions.

CrelTive, Belgrade, Serbia Apr 2016 – Sep 2017
Backend Developer
- Built PHP (Laravel, Symfony) and Node.js backends for agency clients, including webshops from scratch, shared libraries for recurring patterns, and parts of the in-house deployment tooling.

Freelance, Remote Feb 2015 – Apr 2016
Full Stack Web Developer (freelance)
- Built a custom CMS in object-oriented PHP and JavaScript, and full-stack websites for clients in Serbia.

Projects

Safety Real Time AI agents Safety Real Time
- AI voice agents, workflow automation and fleet optimization for trucking fleets, built mostly with Claude.

dotfiles github.com/pavstev/dotfiles
- One public setup for three AI coding agents (Claude Code, Cursor, Opencode): 19 skills, 8 agents, and a Rust guard that enforces written rules on agent tool calls.

stevanpavlovic.com
- Personal site on Astro, React and three.js, with an MCP server on a Cloudflare Worker that gives AI agents 8 tools to read my profile, experience, skills and projects.

Education

Bachelor's Degree, Software and Information Engineering Oct 2016 – Oct 2020
Singidunum University, Belgrade, Serbia

High School Diploma, Mathematics and Computer Science Sep 2011 – Jun 2015
Mathematical Grammar School, Belgrade, Serbia

Languages

English: Full professional proficiency (C1); Serbian: Native speaker
